Online Internship Info Session

Main image file: image7.png

Hover description:

Picture this: summer break, and instead of scrolling reels all day, everyone's finally cracking the internship code. This session brought in seniors who had landed roles at CMU, IITM, and top companies to spill exactly how they did it, no sugarcoating. From that first nervous "where do I even start" to a full game plan, the energy in the room made internships feel less like a mountain and more like a mission worth taking on.

The SIH Launchpad

Main image file: image22.jpg

Hover description:

The room was buzzing with hackathon energy. Past SIH finalists and winners walked in not just to talk, but to hype everyone up, sharing the wins, the 3 a.m. debugging chaos, and the lessons that actually matter. By the time the technical session on problem analysis and AI/ML wrapped up, SIH had stopped feeling like a far off dream and started feeling like the next big thing worth chasing.

Invente: Codera & Websitica

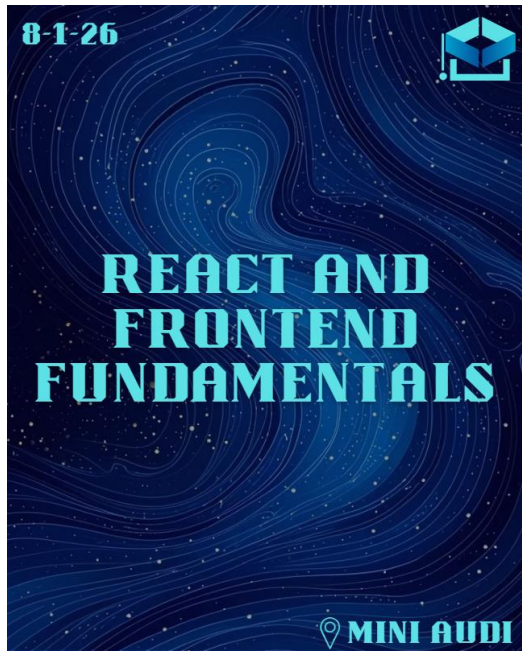

⚠ No photo available for this event yet. Needs to be sourced.

Hover description:

This was ProCoDe's biggest stage of the year, and it showed. Codera and Websitica pulled in a massive crowd from colleges across the city, all fired up to solve real coding problems developers actually face. Multiple rounds of coding, quizzing, and pure creative chaos later, Invente proved once again why it is the techfest everyone circles on their calendar.

Note: the recap doc didn't include a photo for Invente. Pull one from the club drive or the Canva design linked at the end of this doc.

React & Frontend Fundamentals Bootcamp

Main image file: image18.png

Hover description:

Ever stared at a tech stack decision and just frozen? This workshop fixed that. React got broken down piece by piece, with food analogies (yes, really) making Hooks finally click. By the end, the room was not just taking notes, people were already sketching out their own portfolio sites in their heads.

ML & DL Bootcamp

Main image file: image15.png

Hover description:

Two days, zero fluff, all hands-on. Participants got their hands dirty with real housing price and heart disease datasets, riding the full ML rollercoaster from messy raw data to a working, evaluated model. The kind of bootcamp where you walk in curious and walk out genuinely confident you could build this stuff yourself.

DevOps, MLOps & System Design Bootcamp

Main image file: image12.png

Hover description:

URL flows, JWTs, OAuth, CAP theorem: yes, it sounds intense, and it was, but in the best way. This bootcamp tackled the questions every second year secretly googles, including the golden one, why does it only work on my laptop? Enter Docker, and suddenly the whole dev ops world felt a lot less scary.

Internships 101

Main image file: image13.png

Hover description:

Intern season nerves are real, and this session met them head on. Seniors got brutally honest about resumes, project picks, and the constant juggle between DSA and everything else, no gatekeeping, no judgement. One line stuck with everyone walking out: know your projects inside out, because that is what actually gets you through the interview.

Git & Jira Fundamentals

Main image file: image11.png

Hover description:

First years walked in slightly intimidated by words like Agile and Scrum, and walked out throwing them around like pros. This bootcamp made Git and Jira feel less like corporate jargon and more like tools they actually wanted to use, right before diving into their first real team projects.

ProCoDe Cup 2026

Main image file: image4.png

Hover description:

This is the one everyone waits for. ProCoDe's flagship hackathon, IT department only, brought out serious hustle from freshers and second years alike. EdTech, FinTech, digital assistants, defense tech, wild UI/UX ideas, someone built it all. Sleepless nights, way too much coffee, and ideas that actually had a shot: that is the ProCoDe Cup energy.
